INTELLIGENT RACK TRANSFER SWITCH

A COST-EFFECTIVE RELIABLE LOAD TRANSFER SWITCH

Raritan’s hybrid rack transfer switches use electromechanical relays and silicon-controlled rectifiers (SCRs) to transfer a load between two sources. The result is performance and reliability that exceeds that of standard automatic transfer switches (ATS) and at a lower cost than static transfer switches (STS).

MOST RELIABLE POWER FOR SINGLE-CORDED DEVICES

- Patented Anti-Arcing Relay technology engineered to prevent relay-welding and ensures transfer
- Blazing-fast load transfers between 4 to 8 millisecond, tested to never drop a power load in real world conditions
- Out-of-phase transfer eliminates stress about planning phases in the cabinet
- Oversized relays (Rated 70A) to handle larger loads with higher reliability
- Protect the switch with field replaceable fast-blow fuses when the device power supply shorts
- Prevents transfers of output short circuits, leading to cascading failure of second power feed
- Redundant power supply and intelligent controller architecture powered by Xerus™ Firmware
- Granular alerting and control at the outlet level uncovers risky conditions to prevent outages

EMBEDDED WITH XERUS TECHNOLOGY PLATFORM, FOR CONFIGURABLE MONITORING, CONTROL, AND ALERTING

- Xerus Firmware with Scripting, Modbus, and SNMP
- User configurable thresholds for power quality
- Alarm and status updates via GSM text, email and syslog
- Web-based configurable interface
- Hardened network security and encryption protocols: AES128, SSH, SNMPv3, Smart TLS, FIPS 140-2

**MOST TRANSFER SWITCHES ON THE MARKET FALL SHORT OF EXPECTATIONS**

**ELECTROMECHANICAL RELAY SWITCHES (ATS)**
- Vendors’ load transfer times vary from 8 to 16ms.
- The contacts often weld together due to electrical arcing; one of the leading causes of electromechanical relay transfer switch failure.
- Relay-only solutions do not indicate when the relay has welded and therefore no longer able to switch power feeds. Thus data center operators only know their transfer switch has failed when it’s too late, i.e. there is a power failure and no switchover occurs.

**SILICON-CONTROLLED RECTIFIER SWITCHES (STS)**
- Offer very fast transfer times (normally 4 to 6ms), but are over five and a half times more expensive than electromechanical switches.
- Draw significantly more energy than electromechanical relays and produce more heat thereby consuming cooling resources.
- Are less energy efficient requiring forced cooling and lower maximum operating temperatures.
- Reduce the energy efficiency of the rack.

**HERE’S HOW RARITAN’S IS DIFFERENT**

**RARITAN’S PATENT-PENDING HYBRID DESIGN**
- Solid state components provide speedy transfers.
- Patent-pending circuitry reduces wear on electro-mechanical components.
- Eliminates electrical arcing that leads to transfer relay failure.
- Identifies output short circuits and sends an alarm so the short circuit may be corrected before the power transfer is made manually.
- The PX3TS-5000 series provides outlet-level switching and metering as well as reliable power to single corded devices.
- Speed of an STS at a lower cost.
- Fan-free design for increased reliability.
RARITAN’S TRANSFER SWITCH IS FASTER, MORE INTELLIGENT, MORE RELIABLE, AND EASIER TO USE

Multifunction Display
Transfer Switch Indicator Lamps
Field Replaceable Short Circuit Protection
Outlet Level Metering and Switching

Full depth chassis allows a faster and easier access to the outlets, allowing operations teams to gain time, as devices are often stacked between 1U servers.

SMART CONTROLLER ENABLES REMOTE MONITORING AND MANAGEMENT
- Front and rear tablet access and control via USB ports.
- Threshold alerting and status updates via GSM text, email and syslog.
- Logs transfer times for reporting.
- Support for plug-and-play environment sensors.
- USB ports support Wi-Fi, camera, tablet, and cascading.
**PDVIEW — INTEGRATED TABLET DISPLAY VIA USB PORT**

Turns your tablet or phone into a remote display that provides at-the-rack display of all critical data. Simply plug your mobile device in the front or rear USB port to access. Available for iOS and Android devices.

**WEB-BASED REMOTE POWER MONITORING**

Real-time remote power quality monitoring with user definable thresholds and alerts for voltage and frequency. Includes AC waveform of last transfer and metering of power loads.
